

HEAT TRANSFER EQUIPMENT & SYSTEMS

SERIES ECO-Pack & ECO-Pack Plus Instantaneous Water Heaters

ALSTROM Thermal Solutions Series ECO-Pack & ECO-Pack Plus is a compact, high efficiency instantaneous & semi-instantaneous modular hot water heater packages. ECO-PACK Plus utilizes ALSTROM high efficiency Shell & Tube Heat Exchangers and advanced digital temperature control system which facilitates a quick reaction to steam and water flow changes thereby delivering precise water temperature to end user.

The ECO-Pack Modular Packaged Systems provides an advanced reliable solution for the replacement of large hot water storage tanks.

- ADVANCED ALTERNATIVE ENGINEERING DESIGN
 - ENERGY SAVINGS
 - LOW MAINTENANCE COSTS
 - RELIABILITY
- HIGH HEAT TRANSFER EFFICIENCY

Series ECO-Pack & ECO-Pack Plus High Efficiency Instantaneous & Semi-Instantaneous Modular Hot Water Heater Packages

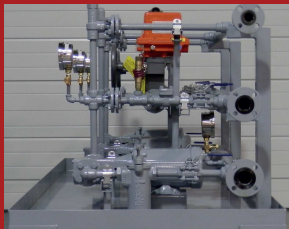

Each ALSTROM Units are equipped with universal, microprocessor based single point temperature controller including Modbus communication. Clear LED readout, it is designed to handle fast control loops with fluctuating loads, permitting precise temperature regulation.

ALSTROM commitment to energy savings is evident with our unique computer modeling method of heat exchangers optimization and advanced microprocessor based control systems. Besides reliability and longevity with our ECO-Pack Plus Series unit's customers can save up to 10-15% on fuel consumption for generating hot water.

ALSTROM presents to you our unique, alternative engineering designs and manufacturing of shell & tube heat exchangers. When you select a heat exchanger from a catalog of another manufacturer, you make a compromise between what you need and what is available. We offer you the absolute best heat exchanger tailored to your specifications.

Many configurations are available to meet most specifications.
Please contact factory for details.
